**Abstract.** Due to the flux of so many words of English as a second language (ESL) in the local languages as media and information technology have crept in to our society, it is generally feared that the local languages or regional languages are at threat. This study was an attempt to investigate general trends of code switching and code mixing by educated classes in our society and its impact on first (Native) and second (English) languages. The visitors were invited to voluntarily provide their feedback regarding the code switching on the stall of “LINGUISTICS KAHKASHAN” set at Mehran University Jamshoro MUET Gala held in the month of May 2015. This study conducted through quantitative research method. The participants transcribed the given passages into Urdu and English languages, and they were provided questionnaires based on close ended questions. The number of the participants was 40. The population visiting the gala was mix i.e. graduate students, teachers and parents. This research provides the general feedback regarding code switching trends in the society due to too much influence of media and information technology. The collected data were analyzed on SPSS. The revelations of data portrayed the picture of society and code switching creating a variety in languages rather than playing havoc with any language. The general population agreed that languages can't escape the influence of media and information technology as both have great say in molding our society and communications trends.

**Key words:** code-mixing, regional languages, media and society.

### Introduction

The main impetus behind investigation regarding threat to local languages due to media is the report by UNESCO in its Red Book regarding the endangered languages of the world. According to UNESCO's Red Book besides other causes, bilingualism is also the one cause in bringing the indigenous languages into the fold of endangered languages. This research project is carried out to find out the impacts of code switching in the media on the local languages. It investigates how much the native languages are affected due to code-switching in TV commercials, talk shows, title of the movies and songs. It will also confirm or deny any threat to native languages due to code-switching in media. Nowadays, media are mouthpiece, whatever is watched on T.V channels, is very much on everyone's lips.

Let's review a short script of a TV program with code-switching:

*Speaker A (female):* Assalamualaikum listeners! Ajj hum ap ko health k hawale se kuch important information farham karien ge. Ap ne note kia ho ga k buht se logon mein

weight put on kurne ki buht tendency hoti he. Weight maintain kurne k liye balanced diet ka hona buht zaroori he. What do you think Dr Zulfikar?

*Speaker B (male):* Yes, of course, lack of balanced diet leads to health problems. Ap ne diekha ho ga k Chinese log boiled food ziada istamal kurte hien, jub k hamare han oily cheezein khane ka rujahan buht common he jo k buht si diseases ka baias bunta he. Is ke ilava log pani sahi quantity mien istamal nahi kurte. Khas tour per summer me pani ka intake buht zarrori he, is k sath blood circulation k liye walk aur exercise bhi lazmi he. Ager in sub cheezon ka khyal rakha jae tu buht si diseases se bacha ja sakta he.

TV Commercials

*Dettol Gold Soap commercial on Pakistani channels:*

Panch das nahi sirf hundred percent better ko khatai hain best. New Dettol Gold, iss ka advance formula, aam anti-bacterial sabins ke muqably mein de hundred percent better protection, yani best protection. Mein manoon sirf Dettol ka dhula.

*Lipton Yellow Label commercial on Pakistani channels:*

*Speaker A (male):* Excuse me, ap kon si chai peeti hain?

*Speaker B (female):* Danedar

*Speaker A (male):* ager iss se ziyada zaiqaydar chai plaoon tu. Ye donoon piyain or batain.

*Speaker B (female):* Hmmm. Ye meri wali hai. Definitely danedar hai ye to uss se bhi bhater hai.

Lipton? Zabberdast!

*Speaker A (male):* ek or surprise doon?

*Speaker B (female):* wow! Hamza.

*Speaker A (male):* phele batata to ap zaiqay ki naheen, meri maan layte. Try karo lipton ek bar, bhool jao ge danedar. warna ap ke paise waps.

*D-Juice commercial on Pakistani TV channels:*

Internet on kar

Orio biscuit commercial on Pakistani TV channels:

Phely click karo

Pher twist karo

Pher dunk karo

Pher kha lo

Titles of Hindi Movies with hybridization are presented with Figs. 1-4.

Fig. 2. Heropanti

Fig. 3. Love Aaj Kal

Fig. 4. Jab We Met

McChesney (1997) advocates that in the modern era societies, the scope of communication has broadened due to media. Media and advertisement go side by side. Advertising is any salaried from a non-personal demonstration of ideas, goods and services by a recognized sponsor (American Marketing Association Chicago)

Globalized economics and media are changing the face of culture around the globe, reducing the number of languages that humans speak. As the world economy becomes more integrated, a common tongue has become more important than ever to promote commerce, and that puts speakers of regional dialects and minority languages at a distinct disadvantage. In addition, telecommunications have pressured languages to become more standardized, further squeezing local variations of language.

#### *Scope of The Study*

This study expands over the recording of certain recorded items of songs, commercials and talk shows of Pakistani channels to highlight the ratio of code switching in them. This can also be a voice of concern to safe guard local languages. It is restricted to MUET Gala participants of 2015.

#### *Objectives*

1. To identify the code-switching affect native languages in media.
2. To justify the English taking roots due to code-switching in our daily communication through media.

#### *Research Questions*

1. How far does code-switching affect native languages in media?
2. How is English taking roots due to code-switching in our daily communication through media?

#### **Literature Review**

In the field of code switching, Grumpez (1996), Leung (2006), Mushtaq and Zahra (2012), Ehsan and Aziz (2014: 160-169), Rasul (2006), McChesney (1997), Stacks, Salwen and Eichhorn (2019) have done research on language and culture communication or interchange for more than three decades. Different quarters come out their own interpretations of code switching and its need in daily communication. Kachru (1986) claims code – mixing at inter-sentential and intra-sentential levels evolve a new

code of linguistic interaction. Eric Garland (2006) believes that globalization is the wave of the future and even unavoidable. The most important is the idea that cultures and languages will disappear and people will adopt a global cultures and languages that will be beyond all boundaries. Shahzad et al. (2012) point out the level of code-mixing in daily Urdu communication is rising with every passing day. Hybridization and mixing in the language is just not a linguistic issue but a socio-cultural phenomenon that needs to be researched.

### Methodology

In quantitative research method the Lickert scale was used in questionnaires with twenty items. There are forty participants, who were visitors including students, parents and teachers. Researcher distributes questionnaire and there were attached the consent forms. The visitors on the festival were informed about the purpose of the stall and they were shown different video clips and pictures regarding code-switching in the media. They were also informed regarding the importance of the findings of the research. They willingly attempted the questionnaires, however, they were cleared the meaning of a few questions in the questionnaire. They not only attempted the questionnaires but admitted unnoticed code-switching in our daily communication due to domination effect of media in our lives. The ascertained data were tested in software SPSS version 20 for the results.

### Data Analysis

Table1 shows that the educated classes who are aware of the structure of the local language observe that hybridization has become rampant due to media. The percentage of the participant verifying the statement is almost 80%.

Table 1. Media is promoting hybridization of native languages

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	strongly disagree	5	12.5	12.8	12.8

**Conclusion**

From the results and observations from questionnaires and transcriptions, it can be said that code switching in the media is really affecting everyday communication in the local languages. The usage of English words is rapidly felt and noticed but as the context belongs to media, it is not seriously taken as any loss to the local languages. On channels, hybridization is common in the commercials and Indian Hindi movies. The effect of that hybridization has been felt by the men in media. This is the reason the Indian sports channel Sports Star has also kept the option of Hindi commentary for the viewers and in that Hindi commentary, there is zero code-switching.

We believe that code-switching on random bases does not harm indigenous languages but frequent code-switching can harm the vocabulary and syntax of indigenous languages. First of all, there is a need of a language policy to be made. From talk shows to commercials, government should have a proper policy to force the usage of national language and regional languages.
